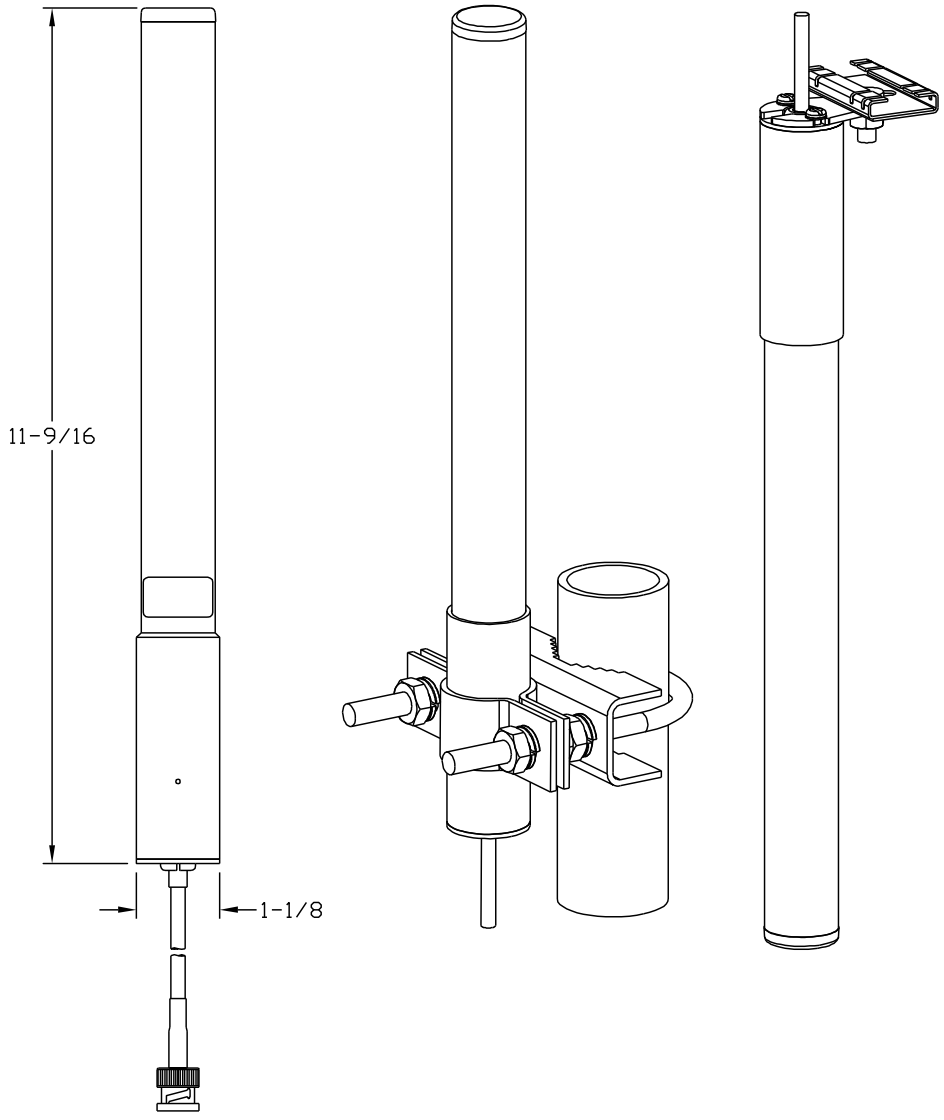
Enterprise Wireless LAN Antenna

Specification Guide

Version 2.8 Revision A May 2015



About This Guide

Introduction

This guide provides a Professional RF engineer a catalog of antennas, parts, and accessories to complete a customized RF instillation of Access Points. This guide specifically addresses the antennas used for 2.4 GHz, 5.2 GHz and dual band antenna implementations for *Wireless Local Area Networks* (WLANs).

It's important to understand that antenna and accessory selection should be qualified by on-site verification with the actual components used. Signal attenuation is cumulative with each connection and component added between the antenna and the radio, so careful study and planning should be used to verify the given arrangement ensures a compliant installation.

NOTE: Illustrations displayed in this guide are samples and can differ from the actual antenna.

Document Conventions

The following conventions are used in this document to draw your attention to important information:

NOTE: Indicate tips or special requirements.

CAUTION: Indicates conditions that can cause equipment damage or data loss.

WARNING! Indicates a condition or procedure that could result in personal injury or equipment damage.

Antenna Selection and Description

1.1 Antenna Selection

While several antennas may work in a given environment, some will provide better coverage than others. Using the right antenna in the right location will maximize both the performance and coverage of your network. Understanding the key characteristics that describe how an antenna sends and receives radio frequency signals is critical to finding the ideal antenna for your deployment.

Enterprise Wireless LAN products operate in the 2.4 GHz and 5 GHz ISM bands allocated for unlicensed use. Access point and access port products available today support either the 802.11b/g/n or the 802.11a/n standard, or both. Wireless devices conforming to the 802.11b/g standard operate in the 2.4 GHz ISM band, while 802.11a devices operate in the 5 GHz band. The antennas in this guide are grouped according to the frequency band they support. Some antennas are designed to operate within either band. These antennas (described as "Dual-band") may be connected to radios operating in either the 2.4 or 5 GHz bands, although a single antenna may not be connected to two radios at the same time.

1.1.1 Connector Types and Definitions

There are combinations of antenna types and cables required to provide a satisfactory connection to the AP. One confusing factor is “reverse polarity”. Reverse polarity is the FCC's requirement for each WLAN manufacturer to have unique access point connectors.

- 2.4 GHz is Reverse polarity BNC female (RP-BNC-F)
- 5 GHz is reverse polarity SMA female (RP-SMA-F).

NOTE: Reverse polarity presents confusion because of a lack of a standardized definition from connector manufactures. Reverse polarity provides a center element, which should not be confused with a male connector. A male connector is defined by the outer jacket of the connector rather than the center element.

The following are the connectors used within this guide:

Figure 1.1 RP-BNC-F

Figure 1.2 RP-BNC-M

Figure 1.3 RP-SMA-F

Figure 1.4 RP-SMA-M

Additionally, antennas deployed outdoors and industry standard accessories (like lightening arrestors) use Type-N connectors (as displayed below). Therefore, with the combinations devices required (access points/ports, antennas, cable extensions, and lightening arrestors), various adapter cables are required to connect an antenna to an access point/port.

Figure 1.5 Type N-F

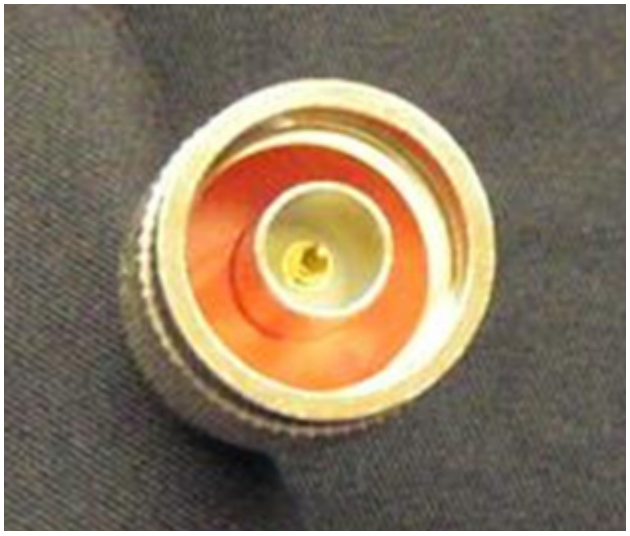

Figure 1.6 Type N-M

1.1.2 Indoor and Outdoor Antennas

One important aspect of an antenna is whether it is weather sealed to protect it from the environment Because of this extra protection, outdoor antennas are typically more expensive than those rated for indoor use. Outdoor antennas can be used for indoor applications, such as freezers and cooler where moisture is common. Outdoor antennas can be used for indoor applications, but indoor applications should not be used in outdoor applications.

One common distinction of outdoor antennas is the connector. Since lightning protection is always advised for outdoor antennas, these antennas typically have Type N Male to directly attach the lightning arrestor. This is true of 2.4 GHz, 5 GHz, and dual-band outdoor antennas.

1.1.3 Spectrum and Part Number Designations

The antennas listed in this document are ultimately referenced by part number. A numerical sequence is used within each antenna's part number to identify the spectrum supported by the antennas.

- The antenna part numbers with a 2499 indicates a 2.4 GHz antenna. For more information on the 2.4 GHz antenna suite, see *2.4 GHz Single Band Antenna Suite on page 3-1*.
- The antenna part numbers with a 5299 indicates a 5 GHz antenna. For more information on the 2.4 GHz antenna suite, see *5.2 Ghz Single Band Antenna Suite on page 4-1*.
- The antenna part numbers with a 2452 indicates a dual band antenna (2.4GHz and 5 GHz). For more information on the 2.4 GHz antenna suite, see *2.4GHz - 5.2GHz Dual Band Antenna Suite on page 5-1*.

1.1.4 Extended AP to Antenna Cable Lengths

Most indoor antennas are intended to be mounted directly to the AP's connectors. Some mounting arrangements call for positioning the AP a significant distance away from the antenna due to serviceability or other reason. In these situations, various adapters and cable extensions are required.

In these situations be mindful of:

- The connector on the AP
- The connector on the antenna
- The spectrum being implemented
- Signal loss due to multiple connectors and long cable lengths

Combinations of these attributes present different parts required to complete the connection. The Product Compatibility matrix addresses the parts required to make a proper connection. For more information, see *FCC Compliance on page 2-1*.

1.2 Antenna Selection Criteria

In addition to antenna frequency, there is other criteria to consider when selecting an antenna.

1.2.1 Antenna Pattern

1.2.1.1 Omni-Directional

Signal radiates from the antenna in all directions on the horizontal plane.

1.2.1.2 Directional

Signal radiates in a specific direction, typically described as a beam of given width, expressed in degrees in the horizontal and vertical plane. For more information, see *Azimuth 3dB Beamwidth on page 1-7* and *Elevation 3dB Beamwidth on page 1-7*.

1.2.2 Antenna Type

1.2.2.1 Panel

A panel antenna is a flat antenna mounted to a wall or other vertical surface and radiates RF energy (radio waves) directionally away from the wall. They usually have gain greater than 5 dBi and are not suitable for omni-directional situations. Ideally suited for long hallways.

1.2.2.2 Patch

A patch antenna is a flat antenna mounted on the ceiling but whose pattern is omni-directional. Most of the energy goes out horizontally to the sides of the antenna and equal in all directions.

1.2.2.3 Dipole

A dipole antenna is a tubular antenna that can be either a pipe shape, a straight flexible rod or a paddle. This antenna has an omni-directional pattern when placed in a vertical position. It usually has 2 dBi of gain.

1.2.2.4 Dipole Array

Essentially a dipole, a dipole array is two or more dipoles that are placed one on top of the other, requiring a longer tube to hold them. The advantage of a dipole array is that it has higher gain.

1.2.2.5 Parabolic Grid

A parabolic grid antenna is a very directional, dish-like antenna. Its parabolic reflector focuses the RF energy like a flashlight. Most of the time the radiating element is a dipole, but when combined with the dish, it becomes very directional with gain up to 24 dBi. Usually used in long point-to-point systems.

1.2.2.6 Yagi

A yagi antenna is a antenna that has an internal structure resembling that of typical antennas used for TV reception (a series of rods perpendicular to a main rod, making a triangular shape). This is a directional antenna with less gain than the PGA, typically around 13 dBi. It may be used in either point-to-point situations, or to cover a very long, narrow area in point-to-multi-point situations.

1.2.3 Antenna Performance Characteristics

1.2.3.1 Frequency

The frequency band within which the antenna performs at the stated specifications

1.2.3.2 Gain (dBi)

The relative amplification of the antenna with respect to an equivalent isotropic antenna, expressed on the decibel logarithmic scale.

1.2.3.3 Cable loss (dB)

The signal strength loss introduced by the cable connected to the antenna expressed on the decibel logarithmic scale.

1.2.3.4 Net gain (dBi)

The resulting amplification of the antenna paired with its cable.

1.2.3.5 Polarization

The orientation of the electrical field which the antenna is optimized to receive. If the transmitting and receiving antennas are both linear polarized, then turning one 90° so that they are cross polarized will reduce the range significantly.

1.2.3.6 VSWR

Voltage Standing Wave Ratio (VSWR) is the ratio of maximum voltage to minimum voltage along the line. Expresses the degree of match between the transmission line and the terminating element (antenna). When VSWR is 1:1 the match is perfect, a VSWR of 1.5:1 corresponds to 96% power efficiency.

1.2.3.7 Azimuth 3dB Beamwidth

Width of the antenna beam on the horizontal plane expressed in degrees.

1.2.3.8 Elevation 3dB Beamwidth

Height of the antenna beam on the vertical plane expressed in degrees.

1.3 Antenna Accessories for Enterprise WLANs

A complete selection of antennas and accessories is available to ensure optimal coverage and performance for wireless LANs. Regardless of the size or layout of your environment, from a small office or storefront to campus-wide, multiple-site, indoor and outdoor deployments, antennas, cables and accessories are available to fit your needs.

By combining this portfolio with a broad line of wireless switches, access ports, access points, client connectivity cards, ruggedized mobile voice/data devices and network management software, as well as wireless mobility planning and deployment services. For more information visit *https://portal.motorolasolutions.com/Support/US-EN/Wireless+Networks.*

1.3.1 Choosing the Right Antenna and accessories for your WLAN

It is important to consider a number of factors when choosing an antenna and accessories for your Enterprise WLAN. To choose the right components, you'll need to know:

- Where is the antenna to be installed, and what type of coverage is required. Knowing the intended radio band is central. Determine if the intended radio coverage area supports dual 2.4/5.2 band traffic. Has the antenuation of the coverage been discerned in respect to known barriers.
- The band (802.11b/g/n or 802.11a/n) your network supports
- Which AP to use
- Whether you will be deploying the network indoors or outdoors
- The distance between AP and antenna, to determine extender cable length, if any
- The serviceablity requirement for each AP and antenna deployment

Review the chart to determine which antennas suit your needs. Using the part numbers provided, determine which of the antennas will work with your hardware in your environment.

2

Product Compatibility

To find the right antenna and accessories for your deployment:

- Find your access point or access port model at the top of the chart (refer to the chart on the following page). Follow that column down to find the antennas, cables and lightning arrestors compatible with that model access port or access point. Write those part numbers down.
- Follow the row antenna across the table to the columns for the lightning arrestors and cables you wrote down to confirm that they compatible with the antenna you've chosen and determine if an adaptor is required to connect the two selected parts.

2.1 FCC Compliance

Enterprise Access Points are approved by the FCC with the understanding that these devices are Professionally Installed. Under FCC regulations, this allows the Professional Installers the flexibility to configure the Access Points for each specific customers needs and insure a compliant installation. The antennas offered in our portfolio have different coverage patterns and antenna gains to meet the needs of different installation requirements and require careful planning. The Access Point transmitter power must be adjusted by the professional installer based on the specific antenna and other installation components used in the installation to ensure compliant operation.

A professional installer must:

- Have a good understanding of RF theory
- Be able to calculate a link budget for a given transmitter configuration. For example, Conducted Output Power + Cabling Losses + Mechanical Connection Losses + Antenna Gain = Output Power (This output power should be equal or lower than the Maximum Power as listed on the FCC Grant for a transmitter)
- Be familiar with both the mechanical and software tools required to configure and adjust the transmitter being installed
- Understand basic FCC regulations for the site specific location and installation requirements of the various radio products being installed
- Understand basic antenna operational theory and standard industry antenna installation practices
- Be certified by local authorities to install electrical devices.

WARNING! OPERATING A TRANSMITTER THAT IS CONFIGURED FOR INDOOR USE IN AN OUTDOOR ENVIORNMENT IS AGAINST FCC REGULATIONS AND SUBJECT TO FCC ENFORCEMENT ACTIONS AGAINST BOTH THE INSTALLER AND THE OPERATOR.

2.1.1 Outdoor Access Point Installations

The FCC regulations for the indoor and outdoor installation are different; the professional installer must configure the Access Point transmitters accordingly. Products that are specifically intended to be placed outdoors are configured at the factory for compliant outdoor operation. Professional installers should review the following to assess the legality of outdoor deplyments:

- If a transmitter is placed indoors but the antenna is placed outdoors, the FCC interprets this as an outdoor installation
- If a transmitter is placed indoors and the antenna is oriented to intentionally radiate outdoors, the FCC interprets this as an outdoor installation
- If the transmitter is placed on a loading dock or inside a covered stadium with a retractable cover, the FCC views this as an outdoor installation

The *Federal Communications Commission* (FCC), the *National Telecommunications and Information Administration* (NTIA) and the *Federal Aviation Administration* (FAA) have an ongoing investigation of interference caused to *Terminal Doppler Weather Radar* (TDWR) systems operating in the 5600-5650 MHz band. TDWRs are used to detect wind shear and other weather conditions near airports.

The interference at most locations was attributed to fixed wireless transmitters operating outdoors in the vicinity of airports at high elevations that are line-of-sight to the TDWR installations (5 GHz network equipment).

In some instances, the interference was caused by equipment that was not properly certified or configured. In other instances, equipment was FCC certified nonetheless caused interference. The FCC has taken appropriate enforcement action in each of these cases.

If everything is determined to be compliant - the FCC orders the interfering transmitter turned off or adjustments be made such that there is no more interference; any non-compliance determined is resolved with an enforcement action.

On 14 OCTOBER 2010 the FCC published the following notice that requests that devices operating in the 5.4 GHz band located near the appended list of airports register these devices. A voluntary WISPA sponsored database has been developed that allows operators and installers to register the location information of the UNII devices operating outdoors in the 5470 - 5725 MHz band within 35 km of any TDWR location.

NOTE: The voluntary registration of all outdoor installations is strongly encouraged at *http://www.spectrumbridge.com/udia/home.aspx*.

2.2 FCC Approval Statement

Federal Communications Commission
Office of Engineering and Technology
Laboratory Division

Interim Plans to Approve UNII Devices Operating in the 5470 - 5725 MHz Band with Radar Detection and DFS Capabilities

The FCC, NTIA, FAA and industry are working to resolve interference to Terminal Doppler Weather Radar (TDWR) systems used near airports that has occurred from some outdoor wireless systems operating in the 5470 MHz – 5725 MHz band. These wireless devices are subject to Section 15.407 of our rules and when operating as a master device they are required to implement radar detection and DFS functions. We are continuing our work to develop long-term equipment authorization test procedures that will ensure that the devices comply with our rules that include protecting the TDWR operations. In the interim, the Commission will now allow certification of wireless master devices with radar detection function and with DFS capability, if they meet the following conditions:

- Devices will not transmit on channels which overlap the 5600 – 5650 MHz band.[1]
- Devices intended for outdoor use will be further restricted, as follows:
  - Devices must be professionally installed when operating in the 5470 – 5725 MHz band.[2]
  - Grantees must provide owners, operators and all such installers with specific instructions in their user's manual on requirements to avoid interference to TDWRs and information that meets the following instructions:
    - Any installation of either a master or a client device within 35 km of a TDWR location shall be separated by at least 30 MHz (center-to-center) from the TDWR operating frequency (as shown in the attached table) [3], [4], and [5].

[1] The devices subject to the requirements in this KDB can select the initial channel for operation to avoid TDWRs and apply the Uniform Channel Spreading requirements (see FCC 06-96 in ET Docket 03-122 released June 30, 2006) on the remaining available frequency band of operation. All the other test procedures including the test radar patterns remain the same at the present time. A revision to the measurement procedure with modification to the Uniform Channel Spreading requirement and other changes will be released in the future. The Commission will also address the issue of any field upgrade option at that time.

[2] The grantee must identify the specific expertise and the training required by the installers for installing these types of devices.

[3] In some instances it is possible that a device may be within 35 km of multiple TDWRs. In this case the device must ensure that it avoids operation within 30 MHz for each of the TDWRs. This requirement applies even if the master is outside the 35 km radius but communicates with outdoor clients which may be within the 35 km radius of the TDWRs.

[4] The requirement for ensuring 30 MHz frequency separation is based on the best information available to date. If interference is not eliminated, a distance limitation based on line-of-sight from TDWR will need to be used. In addition, devices with bandwidths greater than 20 MHz may require greater frequency separation.

- Procedures for the installers and the operators on how to register the devices in the industry-sponsored database with the appropriate information regarding the location and operation of the device and installer information is included.[6]
- Devices must meet all of the other requirements specified in Section 15.407, and it is prohibited to include configuration controls (e.g. country code settings or other options to modify DFS functions) to change the frequency of operations to any frequency other than those specified on the grant of certification for US operation.[7]

- All applications for equipment authorization must clearly show compliance with all of the technical requirements under worst case parameters, under user or operator control, based on frame rates, listen/talk ratios and user data transfer conditions.

All the devices subject to the DFS requirements must be submitted to the Commission's Laboratory Division for pre-grant testing and equipment authorization.[8] The applicant must ensure that all equipment authorization applications subject to this interim procedure include appropriate attestations that the device has no option to change the DFS parameters and that transmissions are disabled at least in the 5600 – 5650 MHz band. The application must include the user's manual with the appropriate installation and operations requirements for the installers and operators.

We are continuing to evaluate additional measures that may need to be taken to further ensure against interference caused by 5 GHz outdoor wireless systems located near airports. While manufacturers have an obligation to ensure that their equipment complies with FCC rules, and must take steps to ensure their devices are unlikely to cause harmful interference, Section 15.5 of the Commission's rules also places an obligation on users of devices to avoid causing interference and to correct any interference that may occur. We encourage the manufacturers to include information for the users, including the operators and installers, to ensure that they understand that it is incumbent on them to cooperate with manufacturers to implement any changes necessary to facilitate compliance.

[5] Devices may be optionally designed not to transmit on channels which overlap 5570 – 5680 MHz instead of requiring installers to perform site-by-site adjustments. In that case it is still required that the devices should be installed professionally and the procedures for registering the device in the industry database should be included in the Users Manual.

[6] A voluntary WISPA sponsored database has been developed that allows operators and installers to register the location information of the UNII devices operating outdoors in the 5470 – 5725 MHz band within 35 km of any TDWR location (see http://www.spectrumbridge.com/udia/home.aspx). This database may be used by government agencies in order to expedite resolution of any interference to TDWRs.

[7] For example, device software must not have any country code options or software configuration settings which allow an end user to modify the DFS operation or impact the performance of DFS. See KDB 594280.

[8] The TCBs are not permitted to approve transmitters with radar detection capabilities. See KDB 628591.

9 The manufacturers may consider taking steps providing clear instructions to operators and installers of devices as to the need to comply with rules for use of the band, guidance on registration of devices and any other processes that are designed to avoid interference. They may use methods that include, but are not limited to, instructions in manuals, notification on product web pages and service bulletins issued for products in the field.

2.4 GHz Single Band Antenna Suite

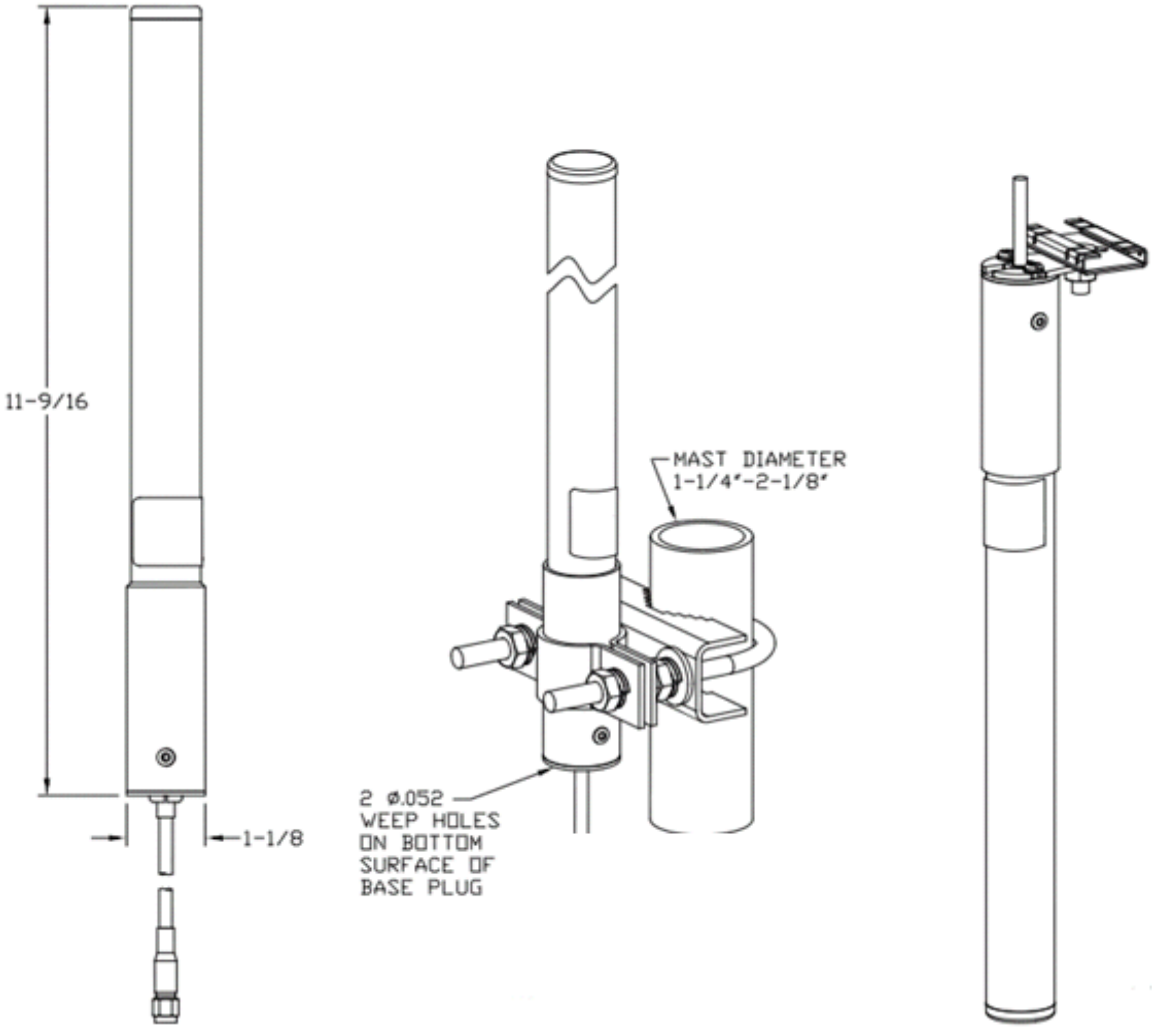
3.1 Supported 802.11b/g/n Antenna Suite

Numerous single-band 2.4 GHz 802.11b/g/n antennas are supported to suit the requirements of your unique access point or access port deployment. Check the Support site periodically, as newly supported 802.11b/g/n antennas will be added to this document as they are released.

For detailed information on supported 802.11b/g/n antenna models, refer to:

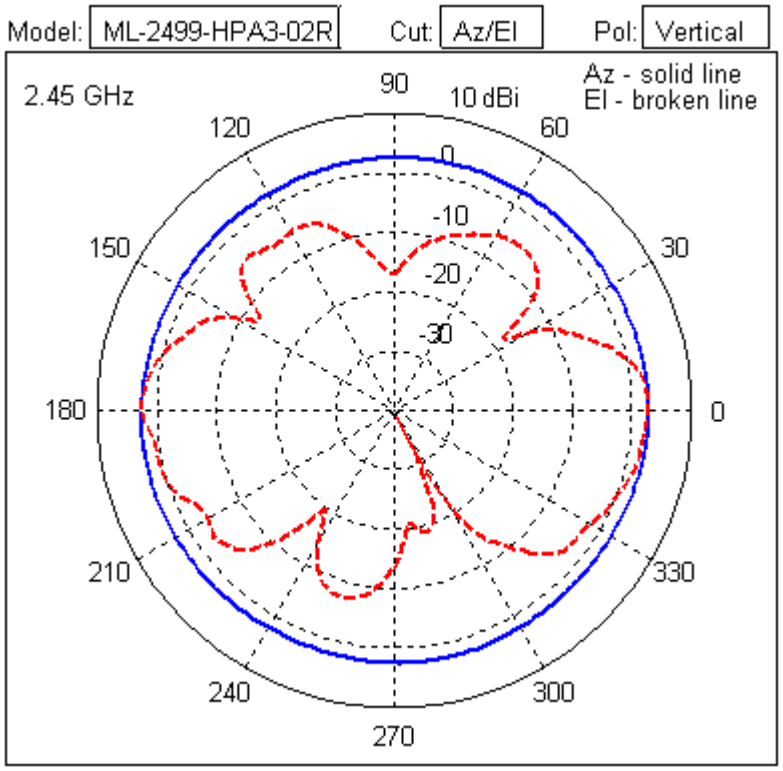
- *ML-2499-HPA3-02R Dipole Omni Antenna: RP-SMA Male*
- *ML-2499-FHPA5-01R Omni-Directional "Pipe" Antenna: N Male Connector*
- *ML-2499-HPA8-01 Outdoor Dipole Omni Antenna: N Male Connector*
- *RAN405A-01R 802.11BGN, Dipole Omni, DT, 7dBi, LP, N-Type-M*

3.1.1 ML-2499-HPA3-02R Dipole Omni Antenna: RP-SMA Male

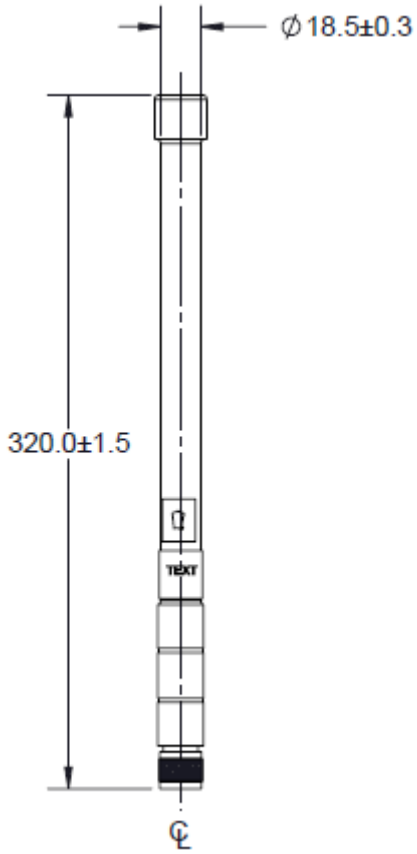


Type	Dipole Omni
Frequency	2400-2500 MHz
Max/Typical Gain (dBi)	5.0/3.0
Polarization	Linear, Vertical
Azimuth	3dB Beamwidth: 360°
Elevation	3dB Beamwidth: 32°
Cable Length (in.)	48
Cable Type	RG-58 Ultralink
Connector Type	RP-SMA Male
Weight	0.3 lbs
Plenum Antenna	No

Plenum Cable	Yes
Outdoor Rated	Yes (in a cable down orientation)
Storage Temp Range (C)	-30 / +70
Operation Temp Range (C)	-30 / +70

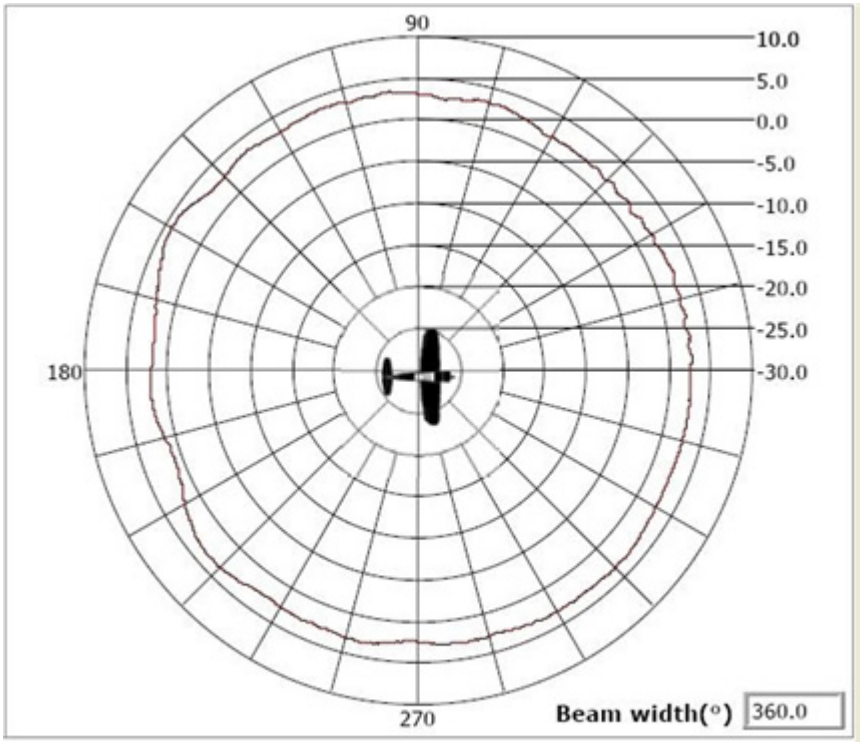


3.1.2 ML-2499-FHPA5-01R Omni-Directional "Pipe" Antenna: N Male Connector

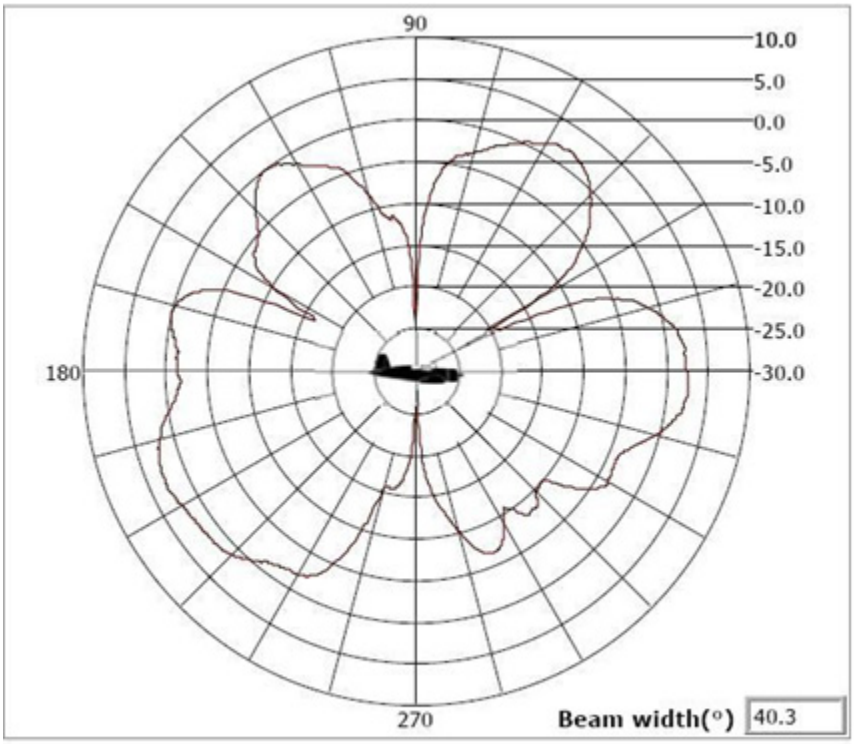


Type	Dipole Omni
Frequency	2400-2500 MHz
Gain (dBi)	5
Polarization	Linear, Vertical
Azimuth	3dB Beamwidth: 360°
Elevation	3dB Beamwidth: 25°
Cable Length (in.)	N/A
Cable Type	N/A
Connector Type	Type N Male
Weight	0.7 lbs
Plenum Antenna	No
Plenum Cable	N/A
Outdoor Rated	Yes
Storage Temp Range (C)	-40 / +85

Operation Temp Range (C)	-30 / +70

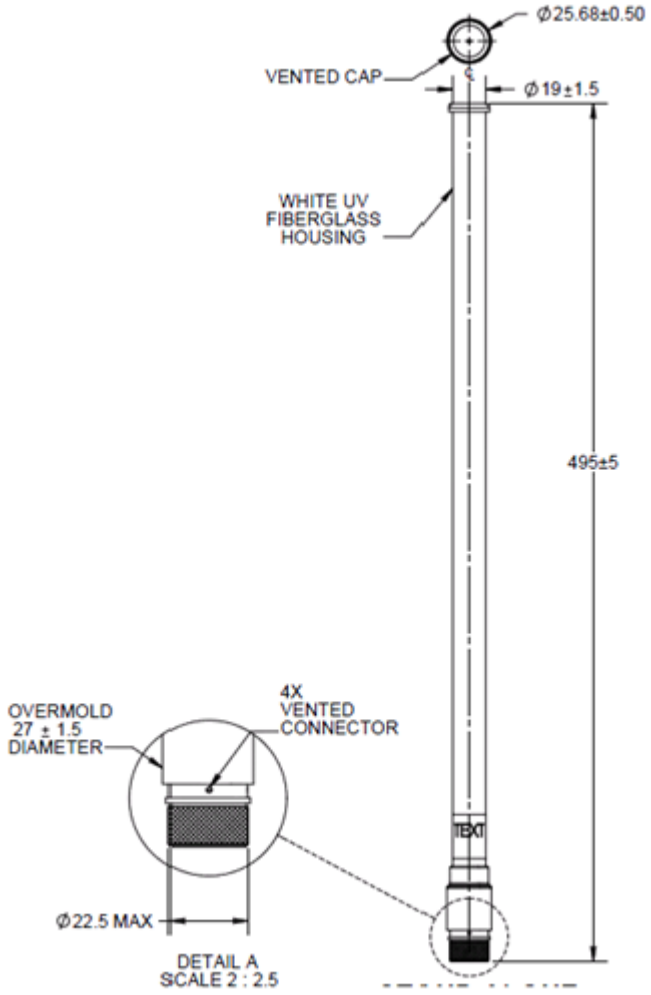


Azimuth Pattern 2450 MHz



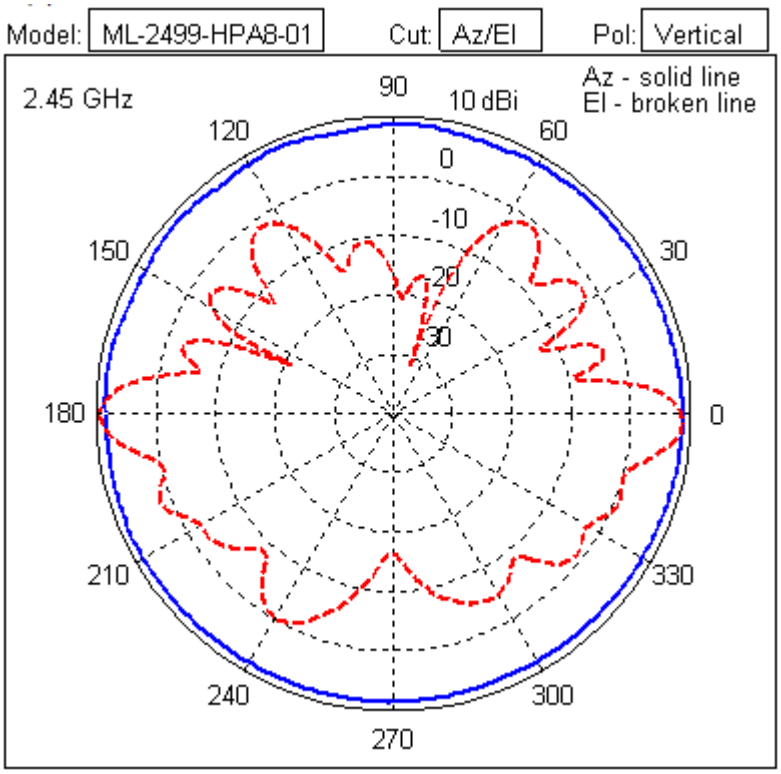
Elevation Pattern 2450 MHz

3.1.3 ML-2499-HPA8-01 Outdoor Dipole Omni Antenna: N Male Connector

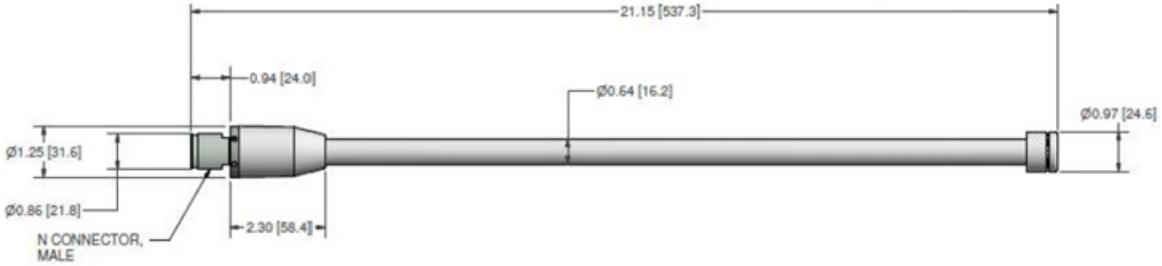


Type	Dipole, Omni
Frequency	2400-2500 MHz
Max/Typical Gain (dBi)	8.0/7.0
Polarization	Linear, Vertical
Azimuth	3dB Beamwidth: 360°
Elevation	3dB Beamwidth: 14°
Cable Length (in.)	n/a
Cable Type	n/a
Connector Type	N-Type Male
Weight	0.45 lbs
Plenum Antenna	No

Plenum Cable	n/a
Outdoor Rated	Yes
Storage Temperature Range (C)	-40 / +85
Operation Temperature Range (C)	-30 / +70



3.1.4 RAN405A-01R 802.11BGN, Dipole Omni, DT, 7dBi, LP, N-Type-M



Type	Dipole, Omni
Frequency	2400-2500 MHz
Max/Typical Gain (dBi)	7.15/ 7.0
Polarization	Vertical
Azimuth	3dB Beamwidth: 360°
Elevation	3dB Beamwidth: 14°
Cable Length (in.)	n/a
Cable Type	n/a
Connector Type	N-Type Male, Fixed
Weight	0.5 lbs
Plenum Antenna	No
Plenum Cable	No
Outdoor Rated	Yes
Storage Temperature Range (C)	-45/ +70

NOTE: ML-2452-PTA2M3x3-1 was formally released as part number ML-2452-APA2-FAC.

Type	Patch x 6 in snap-on facade
Frequency	2400-2500/4900-5990 MHz
MAx Gain (dBi)	3.0/5.0
Polarization	Linear, Vertical
Azimuth	3dB Beamwidth: 360°
Elevation	3dB Beamwidth: 90° (southern hemisphere pattern)
Cable Length (in.)	Integrated into snap-on facade
Cable Type	1.20 mm coax
Connector Type	RP-SMA Male
Antenna Plenum Rated	No

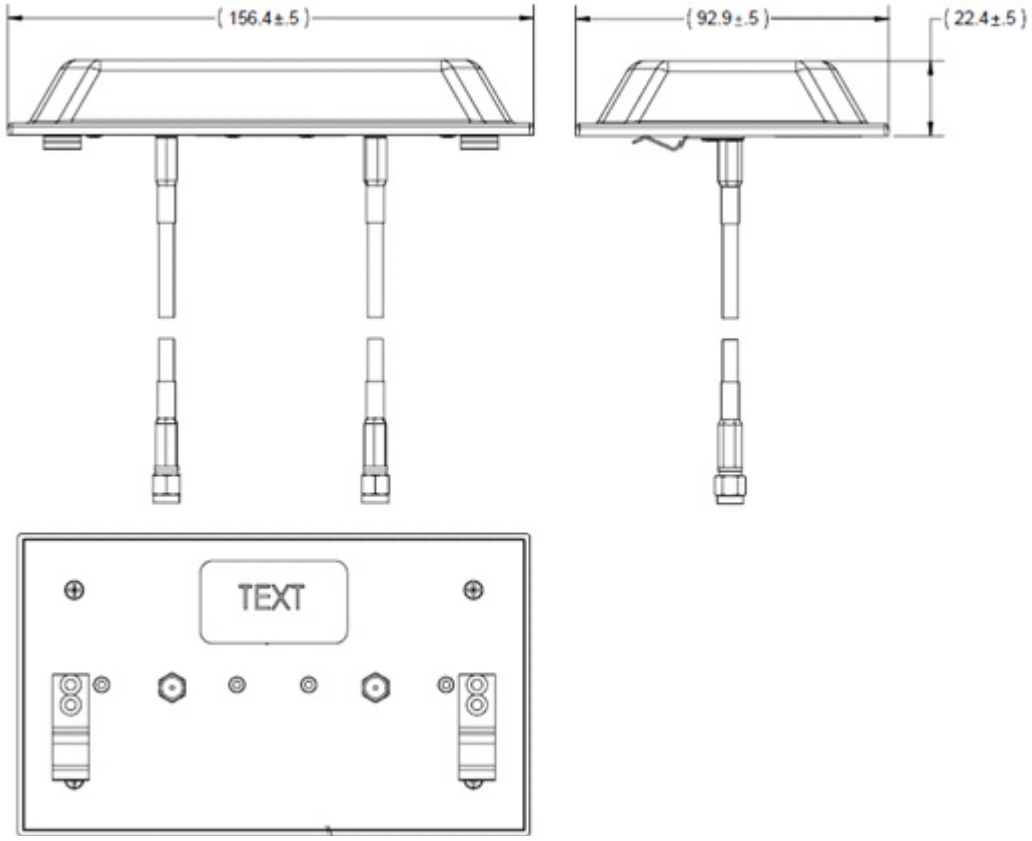
5.1.13 ML-2452-PTA2M2-036 802.11ABG 2-Port Patch Array, RP-SMA Male



Type	Two-port, dual-band omni patch array
Frequency	2400-2500/4900-5990 MHz
Max Gain (dBi)	4.0 /5.0
Polarization	Linear, Vertical
Azimuth	3 dB Beamwidth: 360 degrees (2.4 GHz) 3 dB Beamwidth: 360 degrees (5 GHz)
Elevation	3 dB Beamwidth: 60 degrees (2.4 GHz) 3 dB Beamwidth: 60 degrees (5 GHz)
Cable Length	91.4 cm
Cable Type	RG-58
Connector Type	RP-SMA Male
Antenna Plenum Rated	No
Cable Plenum Rated	Yes
Outdoor Rated	No
Weight	0.5 lbs

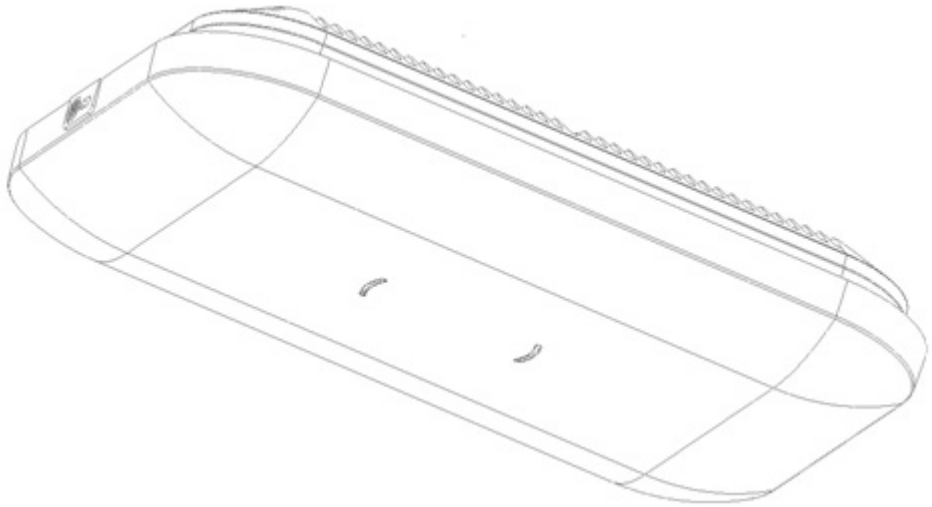
5.1.19 AP8222 Internal 802.11ABGN, 6 x PIFA, -1.8 dBi, LP, U.FI



Type	AP8222 Internal - Antennas 1, 2, 3 (3-Element PIFA Array, 5 GHz only)
Frequency	4900-5900 MHz
Max Gain (dBi)	5.3/-1.8
Polarization	Linear, Vertical
Azimuth	3 dB Beamwidth: 360 degrees (5 GHz)
Elevation	3 dB Beamwidth: 180 degrees (5 GHz)
Cable Length (centimeters)	18
Cable Type	N/A
Connector Type	U.FI x 3
Antenna Plenum Rated	N/A
Cable Plenum Rated	No
Outdoor Rated	No
Weight	TBD
Storage Temp Range (C)	-40/ +70
Operation Temp Range (C)	-20/ +70

Type	AP8222 Internal - Antennas 4, 5, 6 (3-Element PIFA Array, 2.4 & 5 GHz)
Frequency	2400-2500/4900-5900 MHz
Max Gain (dBi)	4.3/-1.8 (2 GHz), 4.7/-1.8 (5 GHz)
Polarization	Linear, Vertical
Azimuth	3 dB Beamwidth: 360 degrees (2.4 GHz) 3 dB Beamwidth: 360 degrees (5 GHz)
Elevation	3 dB Beamwidth: 160 degrees (2.4 GHz) 3 dB Beamwidth: 160 degrees (5 GHz)
Cable Length (centimeters)	18
Cable Type	N/A
Connector Type	U.FI x 3
Antenna Plenum Rated	N/A
Cable Plenum Rated	No
Outdoor Rated	No
Weight	TBD

Antenna Cables

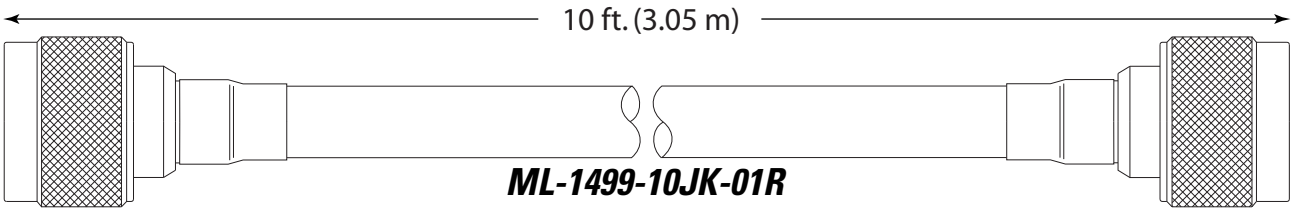
6.1 Supported Antenna Cables

Numerous cables are supported to suit your unique access point or access port deployment. Check the Support site periodically, as new cables will be added to this document as they are released.

For detailed information on supported cables, refer to:

- *ML-1499-10JK-01R 10 ft. Low-Loss Coaxial Cable Jumper: N Male to N Male*
- *ML-1499-25JK-01R 25 ft. Low-Loss Coaxial Cable Jumper: N Male to N Male with 2 Connector Seal Kits*

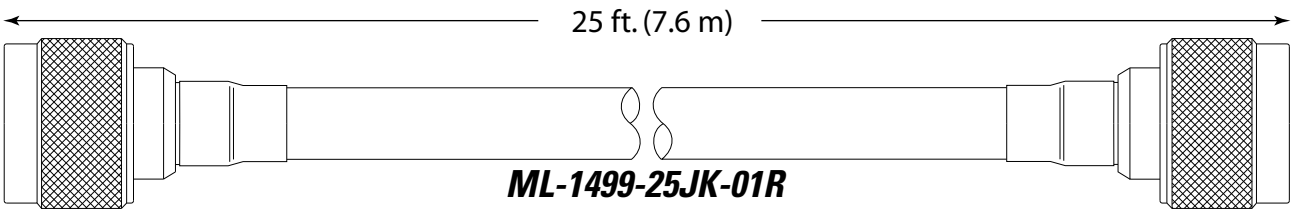
6.1.1 ML-1499-10JK-01R 10 ft. Low-Loss Coaxial Cable Jumper: N Male to N Male



ML-1499-10JK-01R

Type	Ultralink TL 93605
RF Connectors	N (m) to N (m)
Cable Attenuation (dB)	2.0 @ 2.4 GHz; 2.9 @ 5.8 GHz
Frequency	2 - 6 GHz

6.1.2 ML-1499-25JK-01R 25 ft. Low-Loss Coaxial Cable Jumper: N Male to N Male with 2 Connector Seal Kits



ML-1499-25JK-01R

Type	Ultralink TL 93605
RF Connectors	N (m) to N (m)
Cable Attenuation (dB)	2.5 @ 2.4 GHz; 4.0 @ 5.8 GHz
Frequency	2 - 6 GHz

7

Supported Antenna Adapters

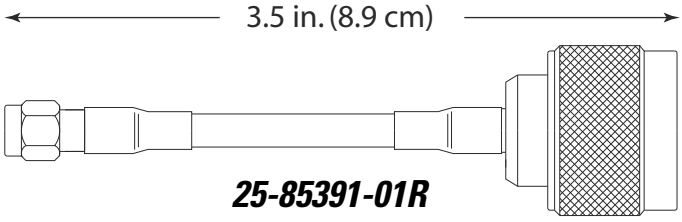
7.1 Supported Adapters

Numerous adapters are supported to suit your unique access point deployment. Check the Support site periodically, as new adapters will be added to this document as they are released.

For detailed information on supported antenna adapters, refer to:

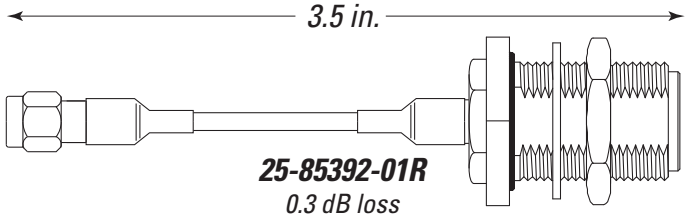
- *25-85391-01R 3.5 in. Jumper Cable, RP-SMA (Male) to Type N (Male) Adaptor*
- *25-85392-01R 3.5 in. Jumper Cable, RP-SMA (Male) to Type N (Female) Adaptor*
- *25-72178-01 Jumper, RP-SMA(M) to RP-BNC(F)*
- *25-90262-01R RP-SMA (Female) to Type N (Female) Adapter*
- *25-90263-01R Type N (Male) to RP-SMA (Female) Bulkhead Adapter*
- *25-99175-01R Type N, Female to Female Adaptor*

7.1.1 25-85391-01R 3.5 in. Jumper Cable, RP-SMA (Male) to Type N (Male) Adaptor



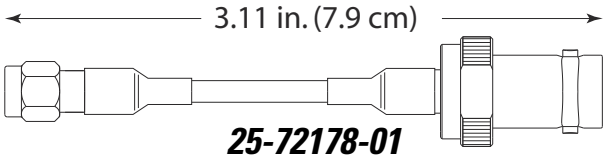
Type	Clear Jacket, RG-316
Connector 1	RP-SMA, Male
Connector 2	Type N, Male
Insertion Loss	2.4 GHz: 0.2 dB MIN
Insertion Loss	5.2 GHz: 0.3 dB MIN

7.1.2 25-85392-01R 3.5 in. Jumper Cable, RP-SMA (Male) to Type N (Female) Adaptor



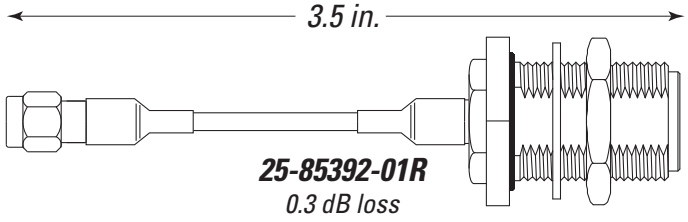
Type	Clear Jacket, RG-316
Connector 1	RP-SMA, Male
Connector 2	Type N, Female, Bulkhead
Insertion Loss	2.4 GHz: 0.2 dB MIN
Insertion Loss	5.2 GHz: 0.3 dB MIN

7.1.3 25-72178-01 Jumper, RP-SMA(M) to RP-BNC(F)



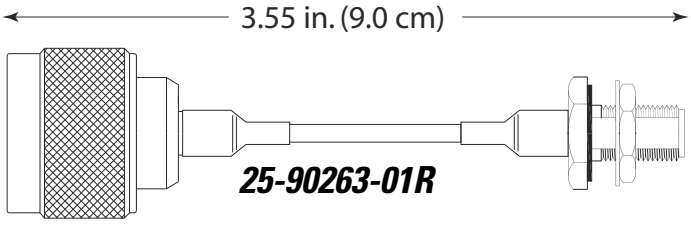
Type	RG-316
Connector 1	RP-SMA, Male
Connector 2	RP-BNC, Female
Insertion Loss	2.4 GHz: .2 dB
Insertion Loss	5.2 GHz: .3 dB

7.1.4 25-90262-01R RP-SMA (Female) to Type N (Female) Adapter



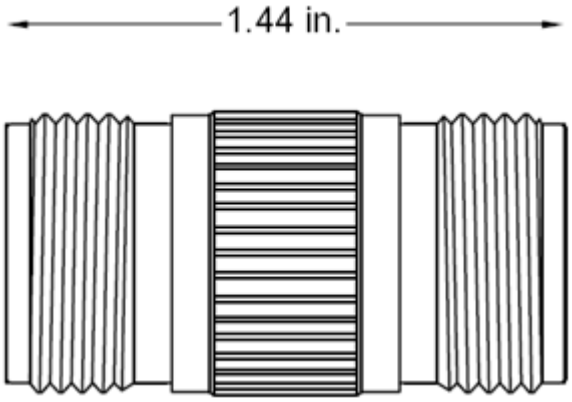
Type	RG-316
Connector 1	RP-SMA, Female, Bulkhead
Connector 2	Type N, Female, Bulkhead
Insertion Loss	2.4 GHz: .2 dB
Insertion Loss	5.2 GHz: .3 dB

7.1.5 25-90263-01R Type N (Male) to RP-SMA (Female) Bulkhead Adapter



Type	RG-316
Connector 1	Type N, Male
Connector 2	RP-SMA, Female, Bulkhead
Insertion Loss	2.4 GHz: 0.2 dB MIN
Insertion Loss	5.2 GHz: 0.3 dB MIN

7.1.6 25-99175-01R Type N, Female to Female Adaptor



Connector 1	Type N, Female
Connector 2	Type N, Female
Cable Loss (dB)	0.3
Cable Length (inches)	1.44

Supported Lightning Arrestors

8.1 Lightning Arrestors

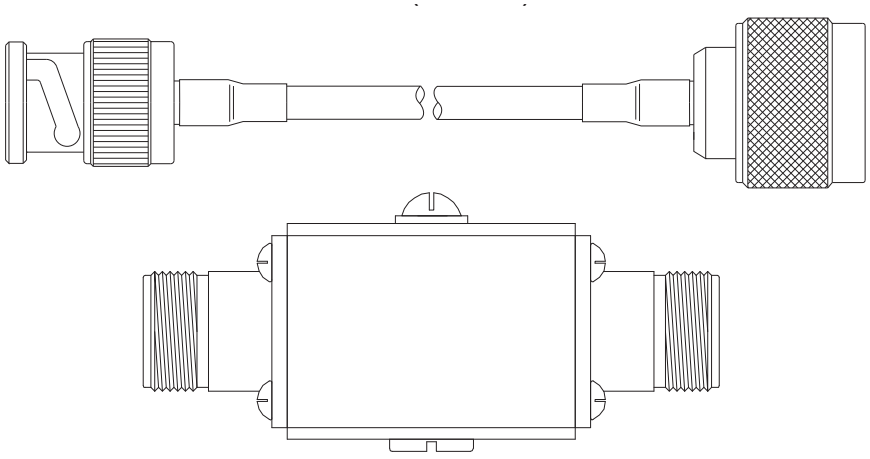
Several lightning arrestors are available to support your unique access point deployment safety requirements. Check the Support site periodically, as new lightning arrestors will be added to this document as they are released.

For detailed information on supported lightning arrestors refer to:

- *ML-1499-LAK1-01R 1 ft. N Male to RP BNC Male Lightning Arrestor with Connector Seal Kit*
- *ML-2452-LAK1-01R Lightning Arrestor (N Female to N Female) with N Male to RP-SMA Male Adapter*

WARNING! The grounding lug on a lightning arrestor must be grounded in compliance with local electrical codes.

8.1.1 ML-1499-LAK1-01R 1 ft. N Male to RP BNC Male Lightning Arrestor with Connector Seal Kit

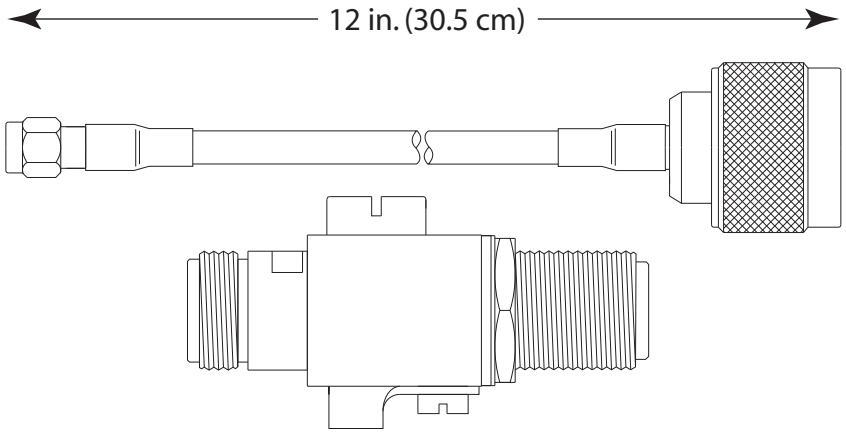


ML-1499-LAK1-01R

Cable	Black, Ultralink, RG-58
RF Connectors	N (m) to RP. BNC (m)
Arrestor RF Connectors	N (f) to N (f)
Frequency	2400-2500 MHz
Insertion Loss - Lightning Arrestor	0.25 dB @ 2.4 GHz
Insertion Loss - Cable	0.6 dB @ 2.4 GHz

NOTE: Not for use above 2500 MHz.

8.1.2 ML-2452-LAK1-01R Lightning Arrestor (N Female to N Female) with N Male to RP-SMA Male Adapter



ML-2452-LAK1-01R

Cable	Black, Ultralink, RG-58
Connectors - Cable	N (m) to RP. SMA (m)
Frequency	100-6000 MHz
Insertion Loss - Cable	0.6 @ 2.4 GHz, 1.4 @ 5.5 GHz
Insulation Resistance	50 M-ohms
Connectors - Lightning Arrestor	Type N (f) to N (f)
Weight	4.5 oz
Operating Temperature	- 40° to 85°C
Insertion Loss - Lightning Arrestor	0.14 @ 2.4 GHz, 0.35 @ 5.5 GHz

9

Mounting Kits

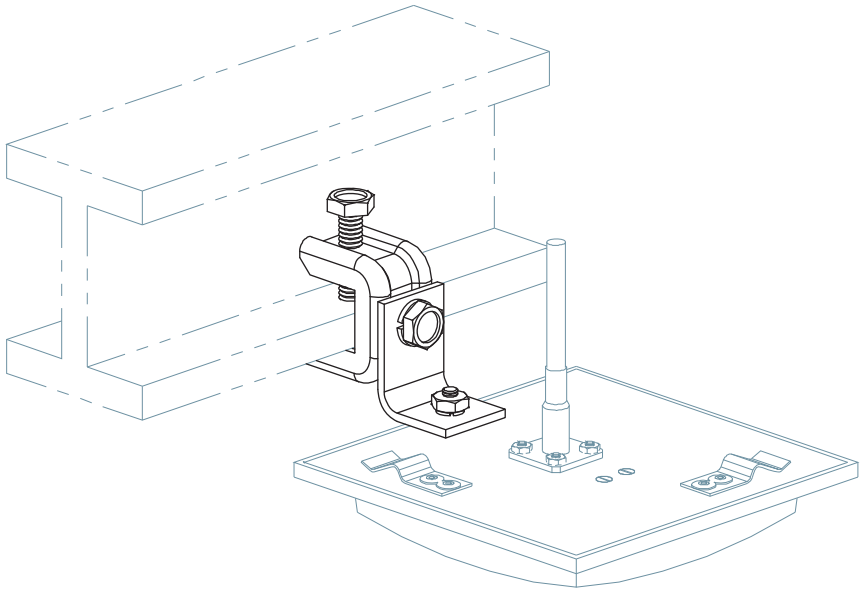
9.1 Mounting Kit Support

Mounting kits are available to support your unique access point deployment. Check the Support site periodically, as new kits will be added to this document as they are released.

For detailed information on supported mounting kits refer to:

- *ML-1499-SD3MK-01R Articulating I-Beam Mount Kit for ML-2499-SD3-01 Omni Antenna*

9.1.1 ML-1499-SD3MK-01R Articulating I-Beam Mount Kit for ML-2499-SD3-01 Omni Antenna



Functionality	Mounts Part No. ML-2499-SD3-01 to an I-beam.

10.2 US Regulatory Domain 2.4 GHz Band

10.2.1 2.4 GHz Mode Versus Data Rate

When setting 2.4 GHz data rates using the access point's GUI applet, use the following chart to cross reference data rates to the radio's selected operational mode.

	B, G and N	***G and N***	***N Only***	***B and G***	***G Only***	***B Only***
LEGACY DSSS RATES (1, 2, 5.5, 11 MBPS)	X			X		X
LEGACY OFDM RATES (6,9,12,18,24,36,48,54 MBPS)	X	X		X	X	
802.11n HT20 RATES (MCS 0 MCS 15)	X	X	X			
802.11n HT40 RATES (MCS 0 MCS15)	X	X	X			

10.2.2 Yagi Antenna Models

The following is the Yagi antenna model for 2.4 GHz:

Part Number
ML-2499-BYGA2-01R

10.2.2.1 Yagi Antenna Maximum Conducted Transmit Power Settings

The following is a transmit power table (US domain) per Yagi antenna in the 2.4 GHz band:

20 MHZ CHANNEL	***40 MHZ CHANNEL***	***LEGACY DSSS RATES (1, 2, 5.5, 11 MBPS)***	***LEGACY OFDM RATES (6,9,12,18,24,36, 48,54 MBPS)***	***802.11n HT20 RATES (MCS 0 MCS 15)***	***802.11n HT40 RATES (MCS 0 MCS15)***

With the most recent AP7131 series software release (4.0.0.0) the Web browser of the command line interface do not allow setting the transmit power to any value less than 4dBm.

NOTE: When a Yagi antenna is used, a 2dB external RF antennuator must be added. Lower power settings will be provided in subsequent software releases.

10.2.3 Panel Antenna Models

The following is the panel antenna model for 2.4 GHz:

Part Number
ML-2452-PTA3M3-036

10.2.3.1 Panel Antenna Maximum Conducted Transmit Power Settings

The following is a transmit power table (US domain) per panel antenna in the 2.4 GHz band:

AP-6511 Regulatory Domains

The AP-6511 model Access Point contains two internal (embedded) dual-band antennas supporting both the 802.11bgn (2.4 GHz) and 802.11an (5.0 GHz) bands. No customer assembly or antenna orientation is required.

The AP-6511 radio can transmit on one or two antennas depending on the operating modes. The radio can receive on one or two antennas as well. The data rates supported are different in each case.

- 2.4 GHz Internal Antenna Peak Gain - 2dBi
- 5 GHz Internal Antenna Peak Gain - 4.5dBi

AP-621 and AP-6521 Regulatory Domains

This chapter describes standard and high power transmission capabilities for AP-621 and AP-6521 access points in both the 2.4 and 5GHz radio bands. The information is provided for the US, EU and Japan regulatory domains. AP-621 and AP-6521 access points support 802.11a/b/g/n in both standard and high power SKUs.

14.1 AP-621 (Standard Power) US Regulatory Domain 2.4GHz Band

The following are standard power transmit tables (US domain) per listed antenna in the 2.4GHz band:

14.1.1 Internal Antenna Model

The following is an AP-621 standard transmit power table (US domain) per Internal antenna in the 2.4GHz band:
